## ABOUT CONFERENCE

In the past fifty years or so the technology has changed the big size computers to small size computers like watch etc. Today is the computer era where the smart computing is being used instead of normal computing, now on a single click we may have the information that which product we should buy & when we should buy it. Smart computing makes the human daily life very easy as we can buy anything from our computer devices at home.

The need for building an efficient computing system has always been the priority of computer technocrats across the globe and these recent developments in the field of computer science have motivated us to organize an **International Conference on Information, Communication and Computing Technology (ICICCT-2016)**. The conference will act as a global platform for the presentation of technological advances and research results in the fields of computer science and information technology and search the remarkable contributions and relevance in theoretical as well as practical aspects. The aim of the conference is to provide a global platform to the researchers and practitioners from both academia as well as industry to meet and share recent development in the technical field. The target audience for the conference is academicians, researchers and IT industry professionals across the globe. The conference focuses on various areas of computer science such as – data mining and big data analytics, computer networks, software engineering, emerging computing technologies, wireless networking etc. The conference will feature an exceptional line-up of invited speakers, researchers, scientists, industrialists, students providing an ideal mix of knowledge and research, academic mastering and industrial talks. It will provide an opportunity to network with computer professionals and experts of various interests.
