(Please write your Exam Roll No.)

Exam Roll No. 05. 21462011

END TERM EXAMINATION

FIRST SEMESTER [BCA] DECEMBER-2011

Pap	er Code: BCA109 Sub	ject: Physics
Tim	e : 3 Hours Max	umum Marks :75
	Note. Attempt one question from each unit including Q.no. I which is com	puisory.
Q1	 (a) Do we need a net force to keep a body moving with uniform veloci answer. (b) What do you understand by a centripetal force? Explain briefly. 	ty? Justify your
	 (c) Kilowatt-hour is a commercial unit of energy. How many joules a kilowatt-hour? (d) State Lami's theorem for equilibrium of a body under concurrent force 	re there in one
	(without any change in direction of motion)?	peed is doubled
	 (f) You are given two capacitors each of capacitance C μr. In now many be combined? What will be the effective capacitance in each case? (g) How will the current flowing through a conductor change if the volt 	age drop across
	the conductor is doubled? Assume that the conductor obeys Ohr your answer.	n's law. Justify
	 (h) Write important postulates of Bohr's atomic model. (i) What is doping of an instrinsic semiconductor? Name the majorit charge carriers in p-type semiconductors. 	y and minority
	(j) What are light emitting diodes (L.E.D.)?	(2.5x10=25)
Q2	UNIT-1(a) Define Newton's second law of motion and define unit of force.(b) Explain how Newton's first law of motion follows from second law.(c) Why are shockers used in scooters and car?	(5) (4) (3.5)
Q3	 (a) Differentiate between static friction and limiting friction. Explain brie (b) The outer rail of a curved railway track is generally raised over the Explain briefly. 	fly. (7.5) he inner. Why? (5)
04	at Define power Name and define SI unit of power	(5)
¥ '	 (a) Define work energy theorem. (b) Define work energy theorem. (c) A car of mass 1000kg is moving with speed 10m/s on a level straig are applied to stop it. Find the work done by the brakes in stopping t 	(2.5) ht road. Brakes he car. (5)
Q5	 (a) What are the main characteristics of an elastic collission and an inela (b) Show that in an elastic collision in one dimension, the relative veloc before collision is equal to relative velocity of separation after collision (c) Define spring constant of a spring. Give its SI units. 	astic collision? (4) city of approach n. (5) (3.5)
	UNIT-III	
Q6	 (a) What is qu'antization of charge? Explain briefly. (b) What do you understand by frictional electricity? A glass rod when r cloth acquires 1.6x10⁻¹³ Coulomb charge. What will be the charge on 	(3.5) ubbed with silk silk cloth? (5)
	(c) State Gauss's theorem in electrostatics. Why is the electrical field in spherical conductor always zero?	nside a charged (4)
Q7	(a) A wire of uniform area of cross section of resistance R ohms and re- meter is cut in to two equal pieces. What are the resistance and re- piece? Justify your answer.	esistivity p ohm sistivity of each
	(b) Draw the circuit diagram of a Wheatstone bridge. Briefly explain the balanced Wheatstone bridge and write the condition for it.	e meaning of a (4.5)
Q8	 (a) Explain briefly Rutherford's alpha scattering experiment and the based on the results of this experiment. (b) What are the drawbacks of Rutherford's atom mcdel? 	atom's model (7.5) (5)
Q9	(a) What are energy bands? Distinguish between insulators, co	onductors and
	(b) What is a transistor? Write briefly the action of a n-p-n transistor.	(5.5)
